SEASONAL LABOR NEEDS FOR CALIFORNIA CROPS

SAN DIEGO COUNTY

Progress Report No. 37

by

R. L. Adams

Preliminary -- Subject to Correction

March, 1937

Contribution from the  
Giannini Foundation of Agricultural Economics  
Mimeographed Report No. 53

Progress Report No. 37

Seasonal Labor Needs for California Crops

San Diego County

Scope of Presentation.-- The following considerations govern the presentation of this progress report:

1. The data are confined to the area indicated above.
2. The data are confined solely to crops, livestock needs being ignored.
3. The findings apply only to occasional or seasonal labor requirements as distinguished from labor contributed by farm operators and by workers employed on a year-round or regular basis of employment.
4. Attention is concentrated upon workers required for hand tasks -- planting, thinning, weeding, hoeing, and harvesting -- without including teamsters, tractor drivers, irrigators, hay balers, threshermen, and shed packers of vegetables or fruits.
5. The presentation includes the so-called migratory, transient, or roving workers which comprise an important source of help needed in connection with certain tasks and at "peak" times which seasonally arise in connection with many field, truck, and fruit crops commercially produced in California.
6. This report is confined to California's need for seasonal agricultural workers because of the more pressing problems liable to arise in connection therewith. A later study is planned which will deal with other kinds of labor involved in the production of California's many crops.

Crops, Acreage, and Production.-- The basis used in calculating occasional or seasonal need for labor, in addition to that furnished by farm operators and regularly employed workers, appears as table 1.

TABLE 1

Basis for Calculating Seasonal Labor Requirements\*  
San Diego County

Crop	Acreage	Production
Field crops:		
Alfalfa †	2,500	15,000 tons
Beans -- black-eye	800	5,600 sacks
Lima	19,500	156,000 sacks
Grain -- barley	8,500	93,500 sacks
wheat	900	7,200 sacks
other	500	4,000 sacks
Hay, other than alfalfa	135,000	89,250 tons
Peas -- Garbanzo †	250	2,000 sacks
Silage crop -- mostly corn †	2,300	34,500 tons
Straw, bean		11,145 tons
Sugar beets	285	2,850 tons

Table continued on next page.

Table 1 continued.

Crop	Acreage	Production
Vegetable crops:		
Asparagus	352	31,680 crates
Beans -- string	1,000	5,250,000 pounds
Cabbage †	100	800 tons
Cantaloupes †	100	16,000 crates
Miscellaneous melons †	200	36,000 crates
Carrots †	200	48,000 crates
Other root crops †	200	45,000 crates
Cauliflower	300	85,000 crates
Celery	1,100	496,000 crates
Corn -- green †	750	195,000 lugs
Cucumbers -- table	700	140,000 lugs
Lettuce †	250	32,500 crates
Onions †	60	8,280 sacks
Peas	2,000 †	132,700 hampers of 30 pounds
Peppers †-- bell	125	160 tons
chili	200	108 tons dried 80 tons green
pimiento	180	540 tons
Potatoes -- sweet †	100	300 tons
white (spring and winter)	1,200	3,600 tons
(summer)	100	600 tons
Rhubarb †	50	650 tons
Spinach †	50	20,000 - 4 dozen crates
Squash -- Italian and summer	850	91,800 lugs of 28 pounds
winter	200	1,000 tons
Tomatoes -- summer	350	225,000 lugs
fall	600	
early spring †	40	10,000 crates (4 baskets)
Watermelons †	150	900 tons
Other vegetables †	300	
Fruit and nut crops:		
Almonds †	26	11,700 pounds
Apples	828	{ 2,235 tons 200 tons culls
Apricots	506	910 tons
Avocados †	4,683	10,014,440 pounds
Citrus fruits -- grapefruit	389	4,617,702 pounds
lemons	5,303	46,284,000 pounds
limes †	52	624,000 pounds
oranges, navel	4,984	26,517,041 pounds
Valencia	1,576	7,270,142 pounds
miscellaneous citrus †	621	2,610,000 pounds
Figs -- Kadota †	59	35 tons
other †	217	325 tons
Grapes -- raisin	2,382	3,930 tons
table	1,322	4,131 tons
wine	1,515	5,151 tons
Loquats †	38 $\frac{1}{2}$	154 tons
Olives	1,082	150 tons
Passion fruit	85	1,530,000 pounds
Peaches	686	1,220 tons
Pears	351	340 tons

Table continued on next page.

Commodity	Quantity	Value	Notes
Pears	240 tons	351	
Peaches	1,320 tons	880	
Pasture fruit	1,530,000 pounds	85	
Olives	180 tons	1,082	
Legumes +	134 tons	38	
Wine	5,151 tons	1,816	
Table	4,151 tons	1,322	
Grapes -- raisin	3,920 tons	2,381	
Other +	325 tons	217	
Pigs -- Kahala +	35 tons	51	
Miscellaneous citrus +	5,810,000 pounds	621	
Volcania	7,270,148 pounds	1,278	
Oranges, navel	28,817,041 pounds	4,932	
Limes +	524,000 pounds	52	
Lemons	48,284,000 pounds	5,302	
Citrus fruit -- grapefruit	4,817,702 pounds	309	
Avocado +	10,014,440 pounds	4,682	
Apples	910 tons	508	
Almonds +	2,325 tons	818	
Straw and nut crops	11,700 pounds	15	
Other vegetables +	300 tons	300	
Watermelon +	10,000 crates (4 bushels)	150	
Early spring +	10,000 crates (4 bushels)	40	
Fall	225,000 lbs	600	
Tomatoes -- summer	225,000 lbs	350	
Winter	1,000 tons	200	
Spinach -- Italian and summer	91,800 lbs of 28 pounds	850	
Spinach +	20,000 - 4 dozen crates	50	
Rhubarb +	880 tons	80	
Potatoes -- sweet +	3,601 tons	1,200	
White (spring and winter)	300 tons	100	
Pistachio	540 tons	180	
Shall	105 tons dried	200	
Papaya -- bell	180 tons	125	
Pears	132,700 baskets of 30 pounds	2,000 +	
Oranges +	8,280 sacks	50	
Lettuce +	22,000 crates	280	
Cucumbers -- table	140,000 lbs	700	
Corn -- green +	192,000 lbs	750	
Celery	492,000 crates	1,100	
Cauliflower	85,000 crates	300	
Other root crops +	45,000 crates	200	
Garrots +	48,000 crates	200	
Miscellaneous melons +	38,000 crates	200	
Cantaloupes +	18,000 crates	100	
Calabos +	800 tons	100	
Beans -- string	3,250,000 pounds	1,000	
Asparagus	21,280 crates	282	
Vegetable crops			

Crop	Acreage	Production
Pecans†	21	10,500 pounds
Persimmons	234	444 tons
Plums	113	232 tons
Prickly pears†		165,760 pounds
Prunes, fresh†	65	78 tons
Walnuts	1,448	625 tons
Miscellaneous nuts†	54	
Miscellaneous deciduous fruits†	476	
Miscellaneous sub-tropical fruits†	318	

\* Data in table 1 are from Crop Production Estimate -- San Diego County, 1935, by R. R. McLean, Agricultural Commissioner, San Diego County, unless otherwise noted.

† Use of seasonal labor inconsequential and hence ignored.

‡ Acreage of green peas unusually high in 1935. Probably will be considerably less on most years.

Operations Requiring the Use of Seasonal Labor and Times of Need.-- Farm operations requiring the use of seasonal labor for the various crops raised in San Diego County, are indicated in table 2. This table does not include the employing of shed workers needed to wash, pack, and prepare various commodities for shipping and marketing.

TABLE 2

Operations Requiring Use of Seasonal Labor and Times of Need by Crops  
San Diego County

Crop	Operation	Time of need	Per cent of work done by seasonal help	Output per man-day
Field crops:				
Beans --	Hoeing (once)	June 1-30 -- all of job	100	2.5 acres
Lima and black-eye	Piling	August 1-31 -- all of job	100	2 acres
	Threshing (with stationary rig)	August 15-31 -- 50 per cent of job		
		September 1-15 -- 50 per cent of job	75	20 sacks
	Processing (or grading)	*		
Grain -- barley, wheat, etc.	Harvesting with combine	July 1-31 -- all of job	25	5 acres
Hay, other than alfalfa	Preparing land and seeding	November } December } January } February }		
	Mowing (with teams)	May 1-31 -- all of job	66	8 acres
	Raking	May 1-31 -- all of job	66	16 acres
	Shocking	May 1-31 -- all of job	66	30 acres

Table continued on next page.

Table 1 continued

Crop	Average	Production
Peasants†	31	10,800 pounds
Peasants	33	444 tons
Pines	115	332 tons
Prickly pears†	65	185,780 pounds
Prunes, fresh†	65	78 tons
Walnuts	1,448	625 tons
Miscellaneous nuts†	54	
Miscellaneous deciduous fruits†	475	
Miscellaneous sub-tropical fruits†	318	

\* Data in Table 1 are from Crop Production Estimate -- San Diego County, 1933, by R. R. Nelson, Agricultural Commissioner, San Diego County, unless otherwise noted.

† Use of seasonal labor inconsequential and hence ignored.

\* Average of green peas unusually high in 1933. Probably will be considerably less on next years.

Operations Requiring the Use of Seasonal Labor and Times of Need -- Farm

operations requiring the use of seasonal labor for the various crops listed in San Diego County, are indicated in Table 2. This table does not include the employing of shed workers needed to wash, pack, and prepare various commodities for shipping and marketing.

TABLE 2

Operations Requiring Use of Seasonal Labor and Times of Need by Crops  
San Diego County

Crop	Operation	Time of need	Work done by seasonal help	Output per man-day
Field crops:				
Beans --	Hoing (once)	June 1-30 -- all of job	100	2.8 acres
Alfalfa and black-eye	Planting	August 1-31 -- all of job	100	2 acres
	Threshing (with stationary rig)	August 15-31 -- 80 per cent of job	78	30 acres
	Processing (or grading)	September 1-15 -- 80 per cent of job		
Grain --	Harvesting with combine	July 1-31 -- all of job	85	5 acres
Barley, wheat, etc.	Preparing land and seeding	November, December, January, February		
Hay, other than alfalfa	Hoing (with beams)	May 1-31 -- all of job	66	8 acres
	Hoing	May 1-31 -- all of job	66	18 acres
	Shedding	May 1-31 -- all of job	66	30 acres

Table continued on next page.

Table 2 continued.

4.

Crop	Operation	Time of need	Per cent of work done by seasonal help	Output per man-day
Hay (cont.)	Trimming	May 1-31 -- all of job	66	10 acres
	Baling (80 per cent of crop)	June 15-30 -- one-third of job	80	4 tons
Straw, bean	Baling	July 1-31 -- two-thirds of job		
		September 1-30 -- 50 per cent of job	80	2 tons
Sugar beets	Thinning	October 1-31 -- 50 per cent of job		
		February 1-28 -- 15 per cent of acreage	100	0.5 acre
		March 1-31 -- 50 per cent of acreage		
	Hoeing -- first	April 1-30 -- 35 per cent of acreage	100	1.5 acres
		April 1-30 -- 50 per cent of acreage		
		May 1-31 -- 50 per cent of acreage		
		May 1-31 -- 50 per cent of acreage	100	3.0 acres
		June 1-30 -- 50 per cent of acreage		
		August -- one-third of crop		
	Topping and loading	September -- one-third of crop	100	5 tons
		October -- one-third of crop		
Truck crops: Asparagus	Picking	March 1-31 -- 10 per cent of crop	100	5 crates $\pm$ (of 30 pounds) 7-hour day
		April 1-30 -- 30 per cent of crop		
		May 1-31 -- 35 per cent of crop		
		June 1-30 -- 20 per cent of crop		
		July 1-15 -- 5 per cent of crop		
	Packing	March 1-31 -- 10 per cent of crop	100	20 crates
		April 1-30 -- 30 per cent of crop		
		May 1-31 -- 35 per cent of crop		
		June 1-30 -- 20 per cent of crop		
		July 1-15 -- 5 per cent of crop		
Beans -- string	Hoeing -- once	March 1-31 -- all of acreage	100	10 acres

Table continued on next page.

Crop	Operation	Time of season	Per cent of work done by seasonal help	Output per man-day
Hay (cont.)	Trimming	May 1-31 -- all of job	88	10 acres
	Baling (80 per cent of crop)	June 1-30 -- one-third of job	30	4 tons
		July 1-31 -- two-thirds of job		
Straw, bean	Baling	September 1-30 -- 80 per cent of job	80	2 tons
		October 1-31 -- 20 per cent of job		
Sugar beets	Thinning	February 1-28 -- 15 per cent of average		
		March 1-31 -- 80 per cent of average	100	0.5 acres
		April 1-30 -- 55 per cent of average		
		April 1-30 -- 80 per cent of average		
	Hoisting -- first	May 1-31 -- 50 per cent of average	100	1.5 acres
	second	May 1-31 -- 50 per cent of average	100	1.0 acres
		June 1-30 -- 50 per cent of average		
	Topping and loading	August -- one-third of crop		
	ing	September -- one-third of crop	100	8 tons
		October -- one-third of crop		
Truck crops: Asparagus	Packing	March 1-31 -- 10 per cent of crop		
		April 1-30 -- 30 per cent of crop		
		May 1-31 -- 35 per cent of crop	100	5 crates # (of 20 pounds) 7-hour day
		June 1-30 -- 20 per cent of crop		
		July 1-15 -- 5 per cent of crop		
	Packing	March 1-31 -- 10 per cent of crop		
		April 1-30 -- 30 per cent of crop		
		May 1-31 -- 35 per cent of crop	100	20 crates
		June 1-30 -- 20 per cent of crop		
		July 1-15 -- 5 per cent of crop		
Beans -- string	Hoisting -- once	March 1-31 -- all of average	100	10 acres

Table 2 continued.

Crop	Operation	Time of need	Per cent of work done by seasonal help	Output per man-day
Beans -- string (cont.)	Picking	May -- 22 per cent of crop June -- 40 per cent of crop July -- 8 per cent of crop Balance scattering and inconsequential	100	250 pounds
Cauliflower	Harvesting	April 1-30 -- 60 per cent of crop May 1-31 -- 40 per cent of crop	50	90 crates
	Packing	April 1-30 -- 60 per cent of crop May 1-31 -- 40 per cent of crop	100	125 crates
Celery	Pulling and preparing plants and planting	August 15-31 -- 25 per cent of acreage September 1-30 -- 50 per cent of acreage October 1-15 -- 25 per cent of acreage	50	18 man-days per acre
	Hoeing (twice)	September 1-30 -- all of acreage October 1-31 -- all of acreage	50	0.25 acre
	Blanching with paper strips	December 1-31 -- one-third of acreage January 1-31 -- one-third of acreage February 1-28 -- one-third of acreage	25	0.25 acre
	Harvesting	December 15-31 -- $5\frac{1}{2}$ per cent of crop January 1-31 -- $33\frac{1}{2}$ per cent of crop February 1-28 -- 33 per cent of crop March 1-31 -- 21 per cent of crop April 1-15 -- $4\frac{1}{2}$ per cent of crop June 1-30 -- $2\frac{1}{2}$ per cent of crop	100	20 half-crates of 75 pounds
Peas	Hoeing (once)	Sometimes a small amount in May and July February 1-28 -- 50 per cent of job March 1-31 -- 50 per cent of job	100	10 acres
	Picking	October 1-31 -- 10 per cent of crop November 1-30 -- 10 per cent of crop December 1-31 -- 19 per cent of crop January 1-31 -- 37 per cent of crop	100	10 hampers

Table 2 continued.

Crop	Operation	Time of need	Per cent of work done by seasonal help	Output per man-day
Grapes (cont.)	Picking for wineries	September 1-30 -- 30 per cent of crop	100	1 ton
		October 1-31 -- 50 per cent of crop		
		November 1-31 -- 20 per cent of crop		
Olives	Picking	January 1-31 -- all of job	100	500 pounds
Passion fruit	Picking up -- summer crop	July 1-31 -- 50 per cent of job	100	60 lugs of 18 pounds net
		August 1-31 -- 50 per cent of job		
Peaches	Pruning	December 15-31 -- 20 per cent of acreage	75	0.3 acre
		January 1-31 -- 40 per cent of acreage		
		February 1-28 -- 40 per cent of acreage		
	Thinning	May 20-31 -- one-third of job	100	0.15 acre (10 trees)
		June 1-20 -- two-thirds of job		
	Picking	July 15-31 -- 25 per cent of crop	100	75 boxes of 25 pounds
		August 1-31 -- 50 per cent of crop		
		September 1-15 -- 25 per cent of crop		
	Packing	July 15-31 -- 25 per cent of crop	100	100 boxes of 27 pounds
		August 1-31 -- 50 per cent of crop		
		September 1-15 -- 25 per cent of crop		
Pears	Pruning	January -- one-third of job	75	0.25 acre
		February -- one-third of job		
		March -- one-third of job		
	Picking	August 15-31 -- 50 per cent of job	75	2,000 pounds
		September 1-15 -- 50 per cent of job		
Persimmons	Packing -- including washing and grading	August 15-31 -- 50 per cent of job	100	80 lugs of 25 pounds
		September 1-15 -- 50 per cent of job		
	Picking	November 10-25 -- all of crop	100	50 boxes of 25 pounds
	Packing	November 10-25 -- all of crop	100	50 boxes of 25 pounds
	Picking	November 10-25 -- all of crop	100	50 boxes of 25 pounds
Plums	Picking	July 20-31 -- 70 per cent of crop	100	50 boxes of 25 pounds
		August 1-4 -- 30 per cent of crop		

Table continued on next page.

Date	Description	Amount	Balance	Total
1901	July 30-31 -- 70 per cent of crop	100.00		100.00
1901	August 1-4 -- 50 per cent of crop	100.00		200.00
1901	September 1-15 -- 50 per cent of crop	100.00		300.00
1901	September 16-30 -- 50 per cent of crop	100.00		400.00
1901	October 1-15 -- 50 per cent of crop	100.00		500.00
1901	October 16-31 -- 50 per cent of crop	100.00		600.00
1901	November 1-15 -- 50 per cent of crop	100.00		700.00
1901	November 16-30 -- 50 per cent of crop	100.00		800.00
1901	December 1-15 -- 50 per cent of crop	100.00		900.00
1901	December 16-31 -- 50 per cent of crop	100.00		1000.00
1901	January 1-15 -- 50 per cent of crop	100.00		1100.00
1901	January 16-31 -- 50 per cent of crop	100.00		1200.00
1901	February 1-15 -- 50 per cent of crop	100.00		1300.00
1901	February 16-31 -- 50 per cent of crop	100.00		1400.00
1901	March 1-15 -- 50 per cent of crop	100.00		1500.00
1901	March 16-31 -- 50 per cent of crop	100.00		1600.00
1901	April 1-15 -- 50 per cent of crop	100.00		1700.00
1901	April 16-30 -- 50 per cent of crop	100.00		1800.00
1901	May 1-15 -- 50 per cent of crop	100.00		1900.00
1901	May 16-31 -- 50 per cent of crop	100.00		2000.00
1901	June 1-15 -- 50 per cent of crop	100.00		2100.00
1901	June 16-30 -- 50 per cent of crop	100.00		2200.00
1901	July 1-15 -- 50 per cent of crop	100.00		2300.00
1901	July 16-31 -- 50 per cent of crop	100.00		2400.00
1901	August 1-15 -- 50 per cent of crop	100.00		2500.00
1901	August 16-31 -- 50 per cent of crop	100.00		2600.00
1901	September 1-15 -- 50 per cent of crop	100.00		2700.00
1901	September 16-30 -- 50 per cent of crop	100.00		2800.00
1901	October 1-15 -- 50 per cent of crop	100.00		2900.00
1901	October 16-31 -- 50 per cent of crop	100.00		3000.00

Crop	Operation	Time of need	Per cent of work done by seasonal help	Output per man-day
Walnuts	Knocking off, picking up, and hulling by hand	September 1-30 -- 30 per cent of crop October 1-31 -- 60 per cent of crop November 1-10 -- 10 per cent of crop	100	200 pounds

\* Processing or grading beans is done during the fall and winter, usually by women. It is generally in warehouses in towns, but on a few large farms is done at the ranch warehouse.

† On the larger farms a limited amount of seasonal help is used for this work.

† Asparagus fields must be picked over each day. This requires one person for each 5 to 10 acres, depending upon how fast the crop is developing, and the output per man-day consequently varies greatly.

§ Requires 6 man-days per acre to set plants in field (35,000 plants per acre). In addition, 12 man-days per acre are required to pull and prepare plants for setting.

¶ Length of day in spraying citrus trees varies greatly with weather, and ranges from 1 to 14 hours. Cannot be done when it is hot or windy. Estimate based on 9-hour day.

|| Fumigating is done at night, and is greatly dependent upon weather conditions.

\*\* Picking of all citrus fruit has been included as done by seasonal labor. Part of this is done by "skeleton crews," however, who are kept busy more or less steadily throughout the year on a piece work or per day basis.

Findings of Seasonal Labor Needs.-- Details and summaries of seasonal labor requirements of San Diego County agriculture are presented as table 3. The "size of task" are figures drawn from table 1 in terms of either acreage, or output in tons, crates, boxes, or whatever unit is commonly used. The "output per man-day" is an average figure for the entire acreage or output figured in packed crates, hampers, or boxes (in case of fruits and vegetables). If the work is of a nature that requires a crew, different members of which perform different tasks (such as cutting, trimming, loading, and hauling cauliflower; trimming and crating celery, etc.), then the average shown is per man based on the entire crew. Length of day is 9 hours unless otherwise stated. Wide variations in output occur between farm and farm, field and field; and season and season, because of differences in soil types, climatic conditions, weeds, yields, and other factors influencing the amount of work that a laborer can perform in a given day. Moreover, the basis of output is a mature, experienced male worker without reference to use of women, children, and more or less inexperienced help that is sometimes used in connection with certain of the tasks requiring use of seasonal workers. The column headed "available days" reflects (a) limitations set from the period within which the work must be performed because of the nature of the task, such as transplanting, thinning, weeding, and cutting, and (b) available days as determined by weather conditions, inclement weather reducing the number of

days when a required task can be performed. The "required number of individuals" is given in terms of workers as noted above in connection with "output per man-day."

It is probable that the estimated number of workers required, as recorded in table 3, will often be too low, for the reason that "peaks" frequently occur, during which an unusually large proportion of the job is done in a very short period. This would naturally require a much greater number of workers than when the work is spread over a longer period, even though the total amount of labor (in man-days) remains the same.

of the "average" worker in the "average" industry. The "average" worker in the "average" industry is not a real person, but a statistical abstraction. The "average" worker in the "average" industry is not a real person, but a statistical abstraction.

It is probable that the "average" worker in the "average" industry is not a real person, but a statistical abstraction. The "average" worker in the "average" industry is not a real person, but a statistical abstraction. The "average" worker in the "average" industry is not a real person, but a statistical abstraction.

TABLE 3

## Seasonal Labor Needs -- San Diego County -- by Months and Tasks

Month	Crop and task	Size of task	Output per man-day	Required man-days	Available days	Required number of workers*
January	Celery: Blanching with paper strips	92 acres †	0.25 acre	368	20	19
	Harvesting	166,160 crates	20 crates	8,308	20	416
	Peas: Picking	49,099 hampers	10 hampers	4,910	20	246
	Potatoes (winter and spring): Cutting seed	1,200 sacks	10 sacks	120	10	12 (from 1-15)
	Picking up after digger	216 tons	75 lugs †	165	20	9
	Squash (soft): Picking	16,359 lugs †	20 lugs	818	20	41

				10,538	22	479 man-months ¶

\* On a monthly basis unless otherwise noted.

† Portion of job done by seasonal workers.

Table continued on next page.

Table 3 continued.

‡ Lugs of 35 pounds net weight.

♂ Boxes of approximately 40 pounds net weight.

⌘ It should be noted that this figure, rather than representing the required number of individuals, represents the required man-months of seasonal labor, and is derived by dividing the total number of man-days by the total number of days available for work during the month.

|| Thinning apples requires 8 man-days per acre.

\*\* Lugs of 18 pounds net weight.

†† Boxes of 25 pounds net weight.

‡‡ Boxes of 27 pounds net weight.

♂♂ Pulling and preparing and planting celery plants requires 18 man-days per acre..

⌘⌘ Packed boxes of 23 pounds net weight.

// Lugs of 25 pounds net weight.

✓ Peak daily shipments of celery at Chula Vista are normally around 20 cars, requiring about 400 field workers and 50 or 60 shed packers. Shipments may reach 30 to 35 cars per day at times, however, which would considerably increase the demand for labor.

TABLE 4

Summary of Seasonal Labor Needs by Months  
San Diego County  
1935

Month	Required man-days of seasonal labor	Available days	Required man-months of seasonal labor
January	28,706	20	1,436
February	25,056	22	1,139
March	20,160	24	840
April	11,567	24	482
May	45,794	25	1,832
June	36,590	25	1,464
July	24,591	26	946
August	35,016	25	1,401
September	30,975	26	1,192
October	27,717	26	1,067
November	13,608	24	567
December	10,538	22	479
Total	310,318	--	12,845

Notes

Notes on Table 2.-- Data concerning "time of need," as shown in this table, break down required seasonal labor into the period when the work is performed in order to permit a subsequent determination of labor needs by months (table 3). Some operations are performed only to a limited extent by seasonal workers. For instance, only about 25 per cent of the labor in harvesting grain is done by seasonal workers. When a job extends over several different months, the proportionate amount for each month is shown.

The amount of work done each month is based on the cropping system followed during 1935. The allotting of amounts of work is based on findings concerning local farm practices and required time to "make" a crop, resulting from inquiry of producers, and records of shipments, the latter proving helpful in fixing dates of planting and subsequent tasks involved in producing a given crop. Proportionate amounts of output harvested each month were determined from data of local practices with respect to harvesting, and from carlot shipments of perishable products. Records of truck shipments were also used when available.

Notes on Table 3.-- Table 3 is the condensed summary of labor needs as worked out for San Diego County, as a result of findings pertinent to 1935. The data are presented by months with the tasks which were performed in each month indicated by both crop and task. The size of the job was calculated from the data appearing in table 1 (acreage and production) and table 2 (task, time of performance, and percentage of work pertinent to a given month). The output per man-day was calculated as indicated in the foreword presenting table 3. The number of required man-days is a result of dividing the size of task by output per man-day. The available days for the different tasks involve two variables. The first is the number of days when field work is possible because of favorable weather conditions. The basis for this column was determined from a study of the monthly weather charts of the United States Weather Bureau for the years 1933, 1934, and 1935. These data indicated available days per month as follows (based on a 26-day working month without allowance for holidays):

Month	Available days	Length of work day hours	Month	Available days	Length of work day hours
January	20	9	July	26	9
February	22	9	August	25	9
March	24	9	September	26	9
April	24	9	October	26	9
May	25	9	November	24	9
June	25	9	December	22	9

Source of data: Based on precipitation records of the El Cajon station of the United States Weather Bureau for the years 1933, 1934, and 1935.

The second factor influencing the number of available days was the size of the job. If the output was but for a few cars, then the number of days was limited to the time needed to get out these cars efficiently. If a field operation had to be performed in a period less than the number of available days in the month, then the specific number of days was noted. These restrictions are shown in parentheses. For example, in July, picking of apricots was limited to the first twenty days of the month; picking peaches to the last half, etc.

The totals of table 3 show the total required man-days of needed seasonal labor, the available days for field work during the month, and the number of men (as defined in the opening paragraph of table 3) required on a monthly basis to care for the tasks ordinarily performed by seasonal workers.

In an area such as San Diego County, involving a substantial acreage of truck crops, the findings as set forth in this report are bound to fluctuate materially from year to year, because of the influence of market outlook upon what and how much acreage is planted, and when it is planted; because of variable seasonal conditions affecting yields, times of performing operations, and available days; and because of harvesting operations on certain crops being speeded up to supply a good market or retarded to avoid a poor one, resulting in marked variations in the need for harvest labor.

Month	Available days	Length of work day	Month	Available days	Length of work day
January	30	9	July	31	9
February	28	9	August	31	9
March	31	9	September	30	9
April	30	9	October	31	9
May	31	9	November	30	9
June	30	9	December	31	9

Source of data: Based on precipitation records of the El Cajon station of the United States Weather Bureau for the years 1933, 1934, and 1935.

The second factor influencing the number of available days was the size of the job. If the output was but for a few cars, then the number of days was limited to the time needed to get out these cars efficiently. If a field operation had to be performed in a period less than the number of available days in the month, when the specific number of days was noted. These restrictions are shown in parentheses. For example, in July, picking of apricots was limited to the first twenty days of the month; picking peaches to the last half, etc.

The totals of table 2 show the total required man-days of needed seasonal labor, the available days for field work during the month, and the number of men as defined in the opening paragraph of table 3) required on a monthly basis to have the tasks ordinarily performed by seasonal workers.

In an area such as San Diego County, involving a substantial acreage of trees, the findings as set forth in this report are bound to fluctuate materially from year to year, because of the influence of market outlook upon what and how much apricots is planted, and when it is planted; because of variable seasonal conditions affecting yields, times of performing operations, and available days; and because of harvesting operations on certain crops being speeded up to supply a good market or retarded to avoid a poor one, resulting in marked variations in the need for harvest labor.
